*An educational consultant of seventeen years, Lisa has presented a wide range of topics to audiences throughout the world.*

### **What's Sex Got To Do With It? Understanding the Mythology of Gender Biology**

Do you consider gender biology when assessing your patients? Research indicates that female gender differences should influence our treatment choices to achieve positive oral and systemic health results.

During this course participants will explore overall health and oral health concerns and how they affect females specifically; from autoimmune diseases to pharmaceuticals and many other conditions, disorders and diseases. Learn the specifics of treatment planning and delivery that are relevant in gender and sex-based biology.

### **Teenagers - What Their Mouths are Telling You But They're Not: Practical Information on Teen Health Issues**

The current and sometimes shocking health behaviors and trends in the younger generation can influence their oral and systemic health. The dental professional has an opportunity during the dental visit to identify risk behaviors and intervene with the teenager to make positive health choices.

Participants will engage in a lively discussion on timely topics relating to teens. Dialogue may include oral and overall health issues associated with cola/sports drink consumption, eating disorders, obesity and substance abuse (Meth Mouth). Examining high risk behaviors and gender differences prepare the dental professional to initiate conversations that will provide guidance with the health decisions that face the youth of today.
